

TICHI WEB APPLICATION — DEFECT REPORTS

Defect Report 1 — Required Issue

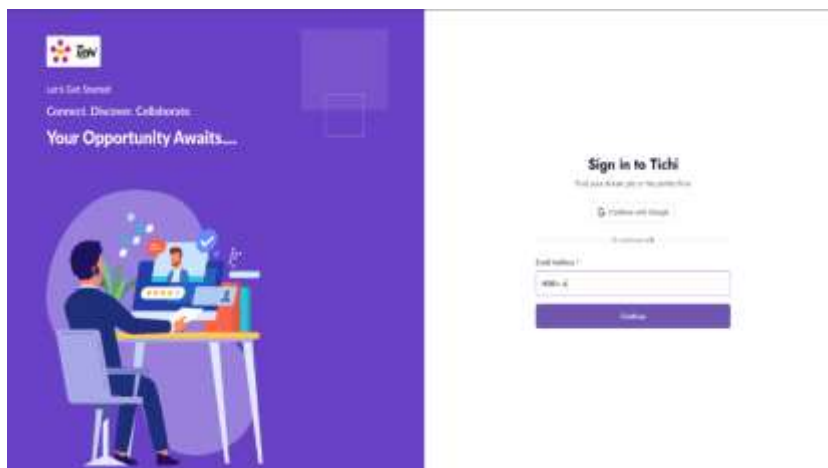

Field	Description
Defect ID	DEF_TICHI_001
Title / Summary	Login page accepts an invalid email format
Description	The Login page accepts an invalid email address format such as zxy@in and allows the user to continue to the next authentication step. An email address without a valid domain extension should be rejected before the user can proceed.
Steps to Reproduce	1. Open the Tichi application URL. 2. Navigate to the authentication page. 3. Enter zxy@in in the Email Address field. 4. Click Continue. 5. Observe the application response.
Expected Result	The application should reject the invalid email format and display a validation message such as “Please enter a valid email.” The user should remain on the authentication page.
Actual Result	Assumed: The application accepts zxy@in and allows the user to continue to the next authentication step.
Environment Details	Browser: Google Chrome OS: Windows 11 Environment: Staging Application: Tichi Web Application
Severity	Major
Priority	High
Module / Feature Affected	Login / Email Address Validation
Reported By	Subalakshmi Mohanasundaram
Reported On	03 July 2026
Attachments	Not applicable — assumed defect scenario provided in the assignment.
Status	New
Assigned To	Unassigned
Comments / Notes	This is the assumed defect scenario provided in the assignment. Input validation should be performed before allowing the user to proceed.

Defect Report 2 — Additional Observed Issue

Field	Description
Defect ID	DEF_TICHI_002
Title / Summary	Login page accepts email address with invalid special characters in the local part
Description	The Login page accepts an email address containing invalid special-character combinations in the local part, such as !#\$@in.in, and redirects the user to the Sign Up page. This can allow users to continue registration with an improperly validated email address.
Steps to Reproduce	1. Open the Tichi application URL. 2. Navigate to the authentication page. 3. Enter !#\$@in.in in the Email Address field. 4. Click Continue. 5. Observe the application response.
Expected Result	The application should reject the invalid email address and display a clear validation message. The user should remain on the authentication page.
Actual Result	The application accepts !#\$@in.in and redirects the user to the Sign Up page.

Field	Description
Environment Details	Browser: Google Chrome OS: Windows 11 Environment: Staging Application: Tichi Web Application
Severity	Major
Priority	High
Module / Feature Affected	Login / Email Address Validation
Reported By	Subalakshmi Mohanasundaram
Reported On	03 July 2026
Attachments	Attachment 1 and Attachment 2 are provided below this defect report.
Status	New
Assigned To	Unassigned
Comments / Notes	Reproducible: Yes. The email validation appears to accept some invalid special-character combinations. Validation should consistently reject malformed email addresses before routing users to Sign Up.

Attachment 1: Screenshot showing !#\$@in.in accepted on the authentication page and redirected to the Sign Up page.

Attachment 2: Screenshot showing the application redirected to the Sign Up page.
