

Tichi Web Application – Automation Test Report

Prepared By: Subalakshmi Mohanasundaram

Date: 03 July 2026

Application Under Test: Tichi Web Application

Application URL: <https://tichi-app-webapp-stage.web.app/login>

Environment: Staging

1. Objective

The objective of this automation testing activity was to validate important Login and Sign Up navigation functionality of the Tichi Web Application using Selenium WebDriver. Selected high-priority test scenarios were automated to verify UI elements, input validations, and user navigation behavior.

2. Tools and Technologies Used

Tool / Technology	Details
Programming Language	Java 17
Automation Tool	Selenium WebDriver
Build Tool	Maven
IDE	Eclipse IDE
Browser	Google Chrome
Test Environment	Staging

3. Test Execution Details

Field	Details
Test Script	LoginTest.java
Total Automated Scenarios	10
Execution Method	Eclipse – Run As Java Application
Execution Status	Completed
Result Source	Eclipse Console Output

4. Automated Test Scenario Results

No.	Test Case ID	Test Scenario	Result
1	TC_LOGIN_001	Verify Email Address field is displayed	Pass
2	TC_LOGIN_003	Verify Continue button is displayed	Pass
3	TC_LOGIN_004	Verify Continue button is enabled and clickable	Pass
4	TC_LOGIN_002	Verify Email Address field is mandatory	Pass
5	TC_AUTH_006	Verify invalid email without @ is rejected	Pass

No.	Test Case ID	Test Scenario	Result
6	TC AUTH 007	Verify email with missing domain is rejected	Pass
7	TC AUTH 008	Verify email with incomplete domain is rejected	Pass
8	TC AUTH 003	Verify registered email opens password step	Pass
9	TC AUTH 004	Verify unregistered email redirects to Sign Up page	Pass
10	TC AUTH 005	Verify email is prefilled and read-only on Sign Up page	Pass

5. Test Execution Summary

Total Tests	Passed	Failed	Pass Percentage
10	10	0	100%

6. Execution Notes

The automation script was executed using Google Chrome through Selenium WebDriver. A Chrome DevTools Protocol compatibility warning appeared in the Eclipse Console due to the Chrome browser version. However, the warning did not affect the Selenium execution, and all selected automated scenarios completed successfully.

7. Conclusion

The selected Login and Sign Up scenarios were successfully automated and executed. The results confirm that the tested UI elements, email validation scenarios, and navigation flows behaved as expected during this execution. This automation suite can be extended in future to cover password validation, Forgot Password flow, Google Sign-In, and additional Sign Up scenarios.

8. Execution Evidence

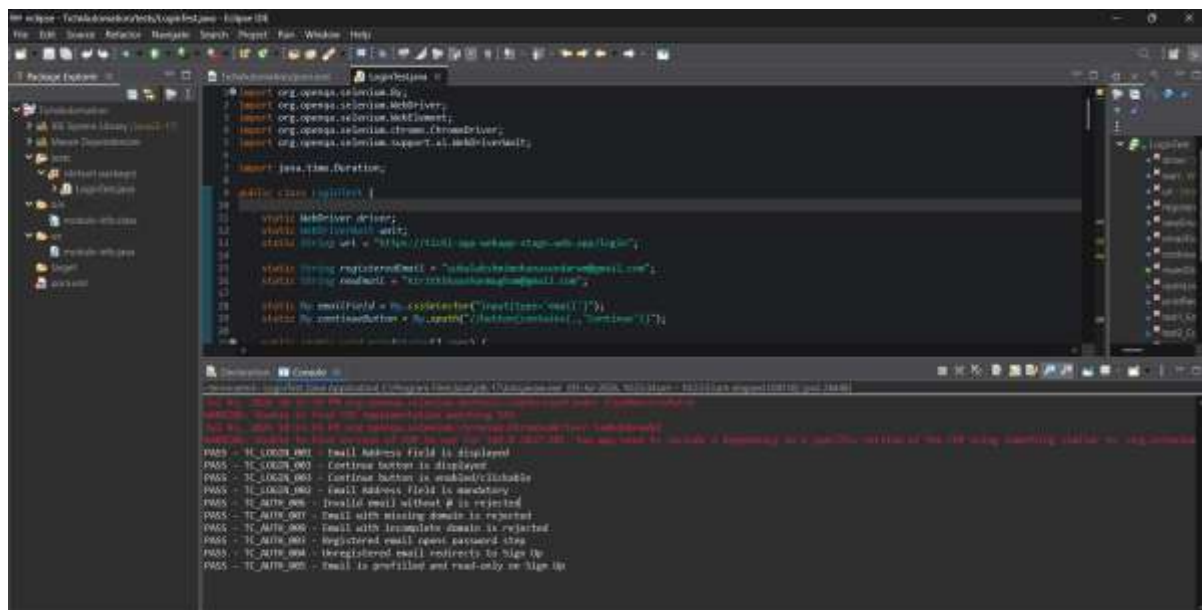

Figure 1: Eclipse Console showing automation execution results
